EDUCATION

Dadi Institute of Engineering and Technology

Bachelor of Technology in Computer Science And Engineering with Data Science

Anakapalle, Andhra Pradesh

2022–2026 CGPA-7.62

Sri Chaitanya Junior College

The Board of Intermediate Education,(B.I.E.A.P)

Visakhapatnam, Andhra Pradesh

2020– 2022 Percentage 81%

INTERNSHIP

Data science Machine Learning, AI

DATAVALLEY

May-June 2024

Intern

- Gained hands-on experience in data science, covered Python, data wrangling, EDA, statistics, Basics of machine learning, deep learning, NLP, big data, and model deployment.
- It includes hands-on projects, real-world applications, and cloud computing concepts.

PROJECTS

Pulmonary cancer prediction | *Python,Pandas,Scikit-learn,TensorFlow/Keras,Gradio,LIME*

Apr 2026

- Built a lung cancer risk prediction system using patient symptom survey data and tested multiple models, including Logistic Regression, Random Forest, and a simple Neural Network.
- Optimized for high Recall to reduce false negatives and used LIME for clear model explainability.
- Deployed the final solution as an interactive Gradio web app, allowing users to enter symptoms and receive quick, easy-to-understand risk predictions.

Retail Sales Forecasting | *Python, Pandas, Matplotlib, Scikit-learn, Prophet, Seaborn*

Aug 2025

- Built a retail sales forecasting model using Facebook Prophet to generate actionable business insights.
- Cleaned and prepared data with Pandas and evaluated model accuracy using RMSE and MAE.
- Visualized forecasts, trends, and seasonality with Matplotlib to support better planning and decision-making.

Student Performance Management System | *HTML,CSS,Python(Flask),MySQL,TiDB,Chart.js,Render*

Jun 2026

- Developed and deployed a full-stack Student Performance Management System using Python (Flask), MySQL/TiDB Cloud, HTML, CSS, and Render to manage student records, automate result processing, and enable efficient data retrieval.
- Implemented automated grade calculation, percentage computation, roll number-based search, and interactive performance visualization using Chart.js, delivering a responsive and user-friendly web application.

CERTIFICATIONS

Programming in C,MS Office - Data pro; Python for Beginners - Simplelearn; My Sql by Infosys springboard; Python for Data science by NPTEL

TECHNICAL SKILLS

Languages: Python,Java

Database: SQL, MySQL

Web Technologies: HTML,CSS

Developer Tools: Microsoft Excel, Git/Github, Visual Studio code,Jupyter Notebook

ACHIEVEMENTS AND ACTIVITIES

- Published a research paper on pulmonary cancer prediction using machine learning and deep learning techniques.
- Led a team at the Samsung Hackathon and developed an AI-based lung disease prediction system achieving 90% accuracy.
- Participated in a two-day Generative AI Hackathon conducted by JNTU-GV, focusing on real-world AI applications.
- Solved **250+ coding problems** on CodeChef, strengthening Data Structures and problem-solving skills.
- Volunteered at the Vizag Navy Marathon, demonstrating teamwork, communication, and event coordination skills.
