CAREER OBJECTIVE

Motivated and detail-oriented developer aiming to build a career in software engineering and data science. I enjoy solving problems and communicating ideas clearly, and I'm eager to apply my skills to real-world projects.

EDUCATION

Dadi Institute of Engineering and Technology <i>Bachelor of Technology in Computer Science And Engineering with Data Science</i>	Anakapalle, Andhra Pradesh 2022–2026 CGPA-7.5
Sri Chaitanya Junior College <i>The Board of Intermediate Education,(B.I.E.A.P)</i>	Visakhapatnam, Andhra Pradesh 2020– 2022 Percentage 81%

INTERNSHIP

Data science Machine Learning, AI DATAVALLEY	May-June 2024 Intern
- Gained hands-on experience in data science, covered Python, data wrangling, EDA, statistics, machine learning, deep learning, NLP, big data, and model deployment. - It includes hands-on projects, real-world applications, and cloud computing concepts.	

PROJECTS

Pulmonary cancer prediction <i>Python,Pandas,Scikit-learn,TensorFlow/Keras,Gradio,LIME</i>	Sept 2025 – Present
- Built a lung cancer risk prediction system using patient symptom survey data and tested multiple models, including Logistic Regression, Random Forest, and a simple Neural Network. - Optimized for high Recall to reduce false negatives and used LIME for clear model explainability. - Deployed the final solution as an interactive Gradio web app, allowing users to enter symptoms and receive quick, easy-to-understand risk predictions.	
Retail Sales Forecasting <i>Python, Pandas, Matplotlib, Scikit-learn, Prophet, Seaborn</i>	Aug 2025
- Built a retail sales forecasting model using Facebook Prophet to generate actionable business insights. - Cleaned and prepared data with Pandas and evaluated model accuracy using RMSE and MAE. - Visualized forecasts, trends, and seasonality with Matplotlib to support better planning and decision-making.	
Audio Extraction from Video <i>Python,moviepy,OS,Visual Studio Code,Git</i>	Aug 2025
- Built a Python utility to extract audio from multiple video formats with batch processing support. - Implemented automated checks for missing or corrupted audio streams, improving reliability and reducing processing errors.	

CERTIFICATIONS

Programming in C,MS Office - Data pro; Python for Beginners - Simplelearn; My Sql by Infosys springboard; Python for Data science by NPTEL

TECHNICAL SKILLS

Languages: Python,C
Database: SQL, MySQL
Web Technologies: HTML,CSS
Developer Tools: Git/Github, Visual Studio code,Jupyter Notebook

ACHIEVEMENTS

- Led a team at the Samsung Hackathon and developed Medi Predict, an AI model for lung disease detection with 90 % accuracy.
- Participated in a two-day GenAI Hackathon at JNTU-GV, focused on Generative AI concepts and applications.
- Solved 200+ problems on CodeChef and notable performance on LeetCode and Hackerrank.
- Volunteered at the Vizag Navy Marathon, showcasing teamwork, communication, and problem-solving skills
